

# The Background Property

```
background: red;
```

background is a shorthand property

# Summary

## The “background” Property

background-image  
background-color  
background-position  
background-size  
background-origin  
background-clip  
background-repeat  
background-attachment

## Gradients

- Linear and radial gradients
- Linear gradients: Direction + color stops
- Radial gradients: shape, size, position and color stops

## The “background” Shorthand

- Watch out for background-position and background-size (center/cover)
- As all shorthands: Overwrites other properties

## Multiple Backgrounds

- You can stack background images (only one solid color which has to be at the bottom)
- Using transparency can create cool effects

## Filters

- Easily add visual effects to boxes
- Affect all content

## <img> vs background-image

- <img> is better for accessibility but way more difficult to style
- background-image can be sized and positioned easier
